

PANEL MOUNT TEST VALVE

Normal operation

Test mode

Back view

Panel mount test valve is a three way valve with an integral quick disconnect coupling. The valve is mounted directly to panel with 2 bolts. To minimize potential leak points valve has only two 1/4 npt connections, one for pressure and one for the gauge. The quick disconnect coupling allows for the connection of a gauge calibrator. Stops are incorporated into handle. Arrow shaped handle points toward gauge during normal operation. To test gauge, plug calibration device into quick disconnect, then turn valve right, handle will now point toward QD. Test can now be performed.

PART # SC-9680

Materials of construction : Aluminum , Stainless Steel.

O ring material: Teflon, Viton

Fluid Compatibility: All Jet fuels, Avgas

Max Pressure: 300 PSI
